

## SWISS PERFIN PUZZLE by D. Houtris.

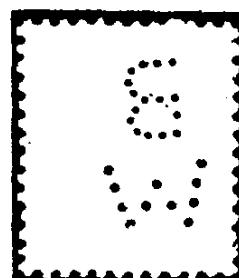

Catalogue numbers used are from the Amateur Collectors Catalogue of Switzerland.

About ten years or more ago while looking at the B61 (Old No.B49) perfins that I'd accumulated, I noticed that there were missing pins in various places in the letter B. I decided to try and get as many of these perfins as possible and to see if there was any pattern to these missing pins. Over the years more than 40 of them came my way and I set about the task of trying to make some sense of what there was. Firstly they were sorted for those with readable cancellations, (those without were put on one side) and it was found that six groups emerged as follows:-

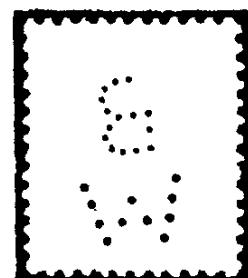

3 2 1  
0 0 0  
4 0  
5 0 0 15  
6 0 17 16  
0 0 0 14

The Hurliman/Ganz Catalogue identifies this B/W perfin as Bank in Winterthur, Winterthur. B 6½mm high and W 5½mm high, with a total of 28 holes. From the above observations it appears that more than one perforating machine may have been used, as dates of use of the different groups overlap.

If any member can throw any more light on the subject, or has a different combination of missing pins please let me know via the editor.
